

SIGNATURE SPEEDOLINE SEMI-AUTO PACKER

Independent electric drive for use on any model of folding carton gluer

The box stream is guided from the folder gluer outlet by means of a spiral conveyor directly to a collection conveyor belt

The batch count is visible on the collection table and ensures an accurate total into the packing case

The cartons are held in position by a spring loaded guide

The folder gluer feeder can be controlled directly from the collection table

The carton stream is modulated by a flow regulator, a facility which is on all Signature models

With overstacked delivery, the Speedoline enables all standard folding boxes of solid board and E-flute to be produced, including 4 corner with lid, and 4 & 6 corner cartons (subject to size limitations)
