

Operation Safety Recommendations

1. Check all emergency [STOP] buttons daily.
2. Keep fingers away from all carrier belts.
3. Be cautious around all pinch point areas.
4. Check that all jam detection switches are functional at least once a week.
5. Always keep safety guards on machine during set up and production.
6. Replace severely worn or damaged carrier belts before operating the machine.
7. Keep all warning and caution signage on the machine, in place and readable.
8. Proper training and tools are required for safe operation and repair attempts.
9. Always wear clothing and hair styles that fit close to the body (within compliance with company dress codes) to avoid contact with the machine and potential injury.
